TERMS OF BUSINESS.

NON-WARRANTY.

Our best efforts are employed to supply only pure and good Seeds, and Plants which are healthy and true to name; yet we give no warranty as to description, quality, productiveness, or any other matter of anything we send out.

Risk of every description must be borne by the purchaser immediately goods (of whatever kind) are delivered to the Carriers. Every order received will be executed on these conditions only.

REMITTANCES.

We shall be pleased to receive remittances in any form that may be convenient to Customers. Postal Orders, Money Orders, and Cheques on any Bank are acceptable.

☞ IF COIN IS SENT BY POST THE PACKET WHICH CONTAINS IT MUST BE REGISTERED.

We should feel obliged if Customers would, where practicable, kindly send a remittance with small orders. Unknown correspondents will kindly send a remittance with the first order, or favour us with a reference.

SUGGESTIONS TO CUSTOMERS.

We shall be glad to receive your order as early as possible. Please send the name and address in full with every order. Kindly inform us of any change of address so that our Catalogues may be forwarded with regularity.

FORWARDING GOODS.

Where no special instructions are given, we shall use our best judgment in the interests of our Customers as to the mode of transit of goods.

Plants as well as seeds are safely forwarded to far-distant places per
Parcel Post.

The rates of postage for any part of the Cape Colony, Basutoland, Natal (including Zululand) the Orange Free State, and the South African Republic (including Swaziland) :—

For British Central Africa:

1/4 not exceeding 1 lb. 1/4 for every additional lb. or fraction thereof.

PRICE 1s. POST FREE.

Gratis and Post Free to Customers.

GOWIES' CULTURAL LISTS

FOR THE TWELVE MONTHS.

A BRIEF SUMMARY OF A YEAR'S WORK IN THE GARDEN.

NOTE.—The Cultural Notes contained in this Catalogue apply particularly to the conditions of climate and season which obtain in and are allied to the Eastern Province of the Cape Colony. They will also, we trust, be found useful in directing operations under varying conditions.

January.

SOW Cabbage, Cauliflower, and Savoy, Lettuce, Radish, Celery, Cress, Mustard, Spinach, Peas, Herbs, and French Beans may also be sown.

Sow Calceolaria, Primula, and Cineraria in a mixture of good turfy loam, leaf mould and sand, in well-drained pots.

Carnation, Stock, Foxglove, Columbine, Wallflower, Daisy, and other hardy flowers, may also be sown.

Seed-beds would be better for some protection from the sun, and a plentiful supply of water is quite indispensable.

PANSIES.

Finest flowers are produced from early sowings—say February, March, April.

FLOWER BULBS.

Prepare ground for planting, in February and March, Anemones, Daffodils, Freesias, Hyacinths, Iris, Ixias, Lachenallias, Narcissus, Ranunculus, Sparaxis, Snowdrops, Tulips, Jonquils, &c.

April.

WHERE conditions are favourable,

ROSES AND STRAWBERRIES

may be planted, also Forest and Ornamental Trees.

FLOWER BULBS.

such as Ranunculus, Hyacinth, Narcissus, Daffodil and Snowdrops, may still be put in. Those coming through the ground will require careful attention; they should be watered regularly in dry weather.

Sow Onion, Turnip, Cabbage, Broad Beans, Lettuce, Beet, Spinach, Parsnip, Carrot, Radish, Shallot, &c. Seeds of Hardy Annuals and Perennials may yet be sown.

The season for planting **FRUIT TREES** is near at hand, and the ground should be got in readiness.

February.**FLOWER BULBS.**

Plant Anemones, Daffodils, Iris, Jonquils, Hyacinths, Narcissus, Ranunculus, Snowdrops, LILY OF THE VALLEY, TULIPS, &c.

FLOWER SEEDS.

Sow Pansy, Stock, Daisy, Godetia, Dianthus, Verbena, Snapdragon, Sweet Peas, Carnation, and other hardy flowers.

VEGETABLE SEEDS.

Sow Cauliflower, Cabbage, Savoy, Onion, Beet, Lettuce, Spinach, Turnip, Radish, Herbs, French Beans, &c.

FARM SEEDS.

Sow Lucerne, Rape, Swede, Mangel, &c.

SEED BEDS

would be better for some protection from the sun, and a plentiful supply of water is quite indispensable.

Plant Potatoes.**May.**

THE SEASON FOR PLANTING

Roses and

Fruit Trees,

ALSO Strawberries,

HAS COMMENCED.

Excellent Peas, Onions, and Broad Beans are obtained from seeds sown this month.

Sow also

CABBAGE, LETTUCE, LEEK,

RADISH.

March.**The Vegetable Garden.**

Plant out Cabbage & Cauliflower.

Sow Onion, Turnip, Cauliflower, Cabbage, Brussels Sprouts, Leek, Broccoli, Parsnip, Spinach, Lettuce, Beet, Carrot, French Beans, Savoy, Endive, Herbs, Parsley, Radish, Shallot, Salsify, Scorzonera, &c.

In favourable weather plant out Strawberries.

The Flower Garden.

Plant Narcissus, Snowdrops, Iris, Hyacinths, Ranunculus, Jonquils, Lily of the Valley, Daffodils, Tulips, Anemones, &c., for winter and early spring flowers.

Sow Pansy, Carnation, Auricula, Dianthus, Stock, Polyanthus, Verbena, Primrose, Snapdragon, Gladiolus, Godetia, Daisy, Sweet Peas, &c.

The Farm.

Sow Cocksfoot, Rye, Hungarian Forage, Schrader's Brome, and other Grasses, Swede and other Turnips, Onion, Cabbage, Rape, Kohl Rabi, Sugar Beet, Carrot, Chicory, Mangel, &c.

June.

THE Planting Season is with us for **FRUIT-TREES, FRUIT-SHRUBS, ROSE-PLANTS, GRAPE-VINES**, and, in a general way, every tree and shrub which casts the leaf; also **STRAWBERRIES, RHUBARB-ROOTS, & HORSE RADISH-ROOTS.**

Excellent Peas, Onions, and Broad Beans are obtained from seeds sown this month.

SOW also

CABBAGE, LETTUCE, LEEK,

RADISH.

GOWIES' CULTURAL LISTS.—continued.

July.

Now is the time to plant Fruit-trees, Fruit-shrubs, Roses, Grape-vines, Forest & Ornamental-trees; also Rhubarb-roots, Horse Radish-roots, and Strawberry-berries.

Hardy Annuals and Perennials,

such as Pansies, Carnations, Pinks, Stocks, Phlox, and Verbenas may be planted out into the open ground.

SOW in boxes, for transplanting, Snapdragon, Larkspur, Marigold, Clarkia, Petunia, Phlox, Verbena, Calliopsis, Pansy, Pinks, and other hardy flowers.

SOW Onion, Turnip, Lettuce, Radish, Peas, Spinach, &c.

October.

SPRING TIME.

At this season, seeds of every kind may be sown, particularly

Cucumber, Melon, Pumpkin, Vegetable Marrow, Rhubarb, Tomato, French Beans, and Mealies.

ALSO

Dahlia, Zinnia, Lobelia, Annual Chrysanthemum, Cockscomb, Balsam, and Portulaca.

Plant Potatoes.

An excellent time to send for plants of the following, viz.:—

Coleus, Begonia, Fuchsia, Chrysanthemum, Geranium, Fern, Gloxinia, Croton, Palm, Dracena, Orchid, and other conservatory and hot-house species.

August.

The season is now well advanced, and the planting of Fruit-trees, Rose-plants, &c., should be completed without delay.

POTATOES.

The planting season has begun.

FLOWER BULBS.

Plant Dahlia, Lily, Caladium, Begonia, Gloxinia, Cyclamen, Tuberose, Tigridia, and Summer Hyacinth.

Aster, Cosmos, Lobelia and other Half-hardy Annuals may be sown.

In view of Springtime, ground should be got in readiness for immediate sowing and planting.

November.

CONSERVATORY AND HOT-HOUSE PLANTS.

Send for Coleus, Begonias, Ferns, Fuchsias, Gloxinias, Geraniums, Crotons, Palms, Dracenas, Orchids.

FLOWER SEEDS.

SOW Zinnia, Portulaca, Cockscomb, Balsam, Lobelia, Mignonette, Phlox, Verbena, Candytuft, &c.

Seed beds and pans should be protected from the sun.

FLOWER BULBS.

Where the foliage of Ranunculus, Anemone, Narcissus, Snowdrops, &c., has died down, the bulbs should be carefully taken up and dried in the shade, then packed in sand and stored in some cool, dry place.

VEGETABLE SEEDS.

SOW Tomato, Cucumber, Melon, Marrow, Pumpkin, Rhubarb, French Beans, Dwarf Peas, and towards the end of the month, Cauliflower and Cabbage.

Marrows and Cucumbers in vigorous growth, and, in fact, all plants in active life, should receive a plentiful supply of water in dry weather.

Stakes and Trellises should be employed for Tomatoes.

Potatoes ripening, if required for seed, should be taken up and carefully stored in a cool, dry cellar or room.

September.

SPRING

TIME.

SEED

TIME.

December.

Trees planted in the Spring, and all Shrubs, should be well watered once a fortnight at least.

Where the foliage of Anemone, Snowdrops, Ranunculus, Narcissus, and other flowering bulbs has died down, the bulbs should be carefully taken up and dried in the shade, then packed in sand, and stored in some cool dry place.

The best Cauliflowers and Cabbages are obtained from seeds sown in the summer months.

Cucumber, Melon, Marrow, Pumpkin, Radish, Lettuce, Spinach, French Beans and Peas may also be put in.

Tender Annuals may still be sown.

Seed-beds and pans will require protection from the sun, and should be kept moist.

Anise

Coriander

Borage

Fennel

Chervil, turnip-rooted

Horehound

Caraway

Lavender

Borage.

PHYSALIS FRANCHETI

“This new plant ... from Japan ... is a giant form, as regards its fruits, of the old Winter Cherry (*P. Alkekengi*). It grows from 1½ to 2 feet high, is of erect habit and covered with beautiful foliage, which shows off its brilliant seed-pods to great advantage. The latter, the striking feature of the plant, are almost globular, over two inches in diameter, of a shining orange-red tint, and enclose a cherry-like fruit of the same colour. This is edible and especially recommended as a preserve.”

pkt. (50 seeds) 2/-

Physalis violacea, large globose dark
violet fruit, about twice the size
of the Cape Gooseberry ... pkt. 6d and 1/-

Cape Gooseberry (*Physalis edulis*).Dutch:—*Appel-der-liefde* ... pkt. 6d & 1/-

|---------------------------------------|--------------------|
| | pkt. |
| * Cherry-formed Red oz. 2/- | 6d and 1/- |
| * Cherry-formed Yellow oz. 2/- | 6d and 1/- |
| Mixed | oz. 2/- 6d and 1/- |

*Useful for preserving and pickling.

CULTURE.—Sow in September and October in good soil in rows three feet apart, and when the plants are a month old thin them out to eighteen inches apart in the rows. Stakes or trellises should be employed.

Cherry-formed Red Tomato.

THE TREE TOMATO (*Cyphomandra betacea*) per packet 6d and 1/-

THE TREE TOMATO.—The seeds here offered are the produce of plants growing in our Nursery—in a warm, sheltered position. The original stock was obtained, in the form of fruits, by our Mr. C. Gowie, in Maritzburg, Natal, from a tree standing about ten feet in height. The fruit when ripe is of a deep orange colour, and in form like an egg. It is very palatable; the taste is suggestive of a combination of Tomato and the fruit of the Granadilla.

CULTURE.—Sow in the spring in boxes, and when the plants have obtained a few leaves transplant to a warm, sheltered position in the garden, nine to twelve feet apart.

SEA KALE per pkt. 6d.

Dutch :—*ZEE KOOL*.

CULTURE.—Sow in the spring in rows about fifteen inches apart. Keep the young plants perfectly clean. Transplant to good rich deeply-trenched ground.

VEGETABLE SEEDS,—continued.

SEED POTATOES.

 **TERMS:—**

**CASH
WITH
ORDER.**

We do our best to supply pure and good seed, but we wish it to be distinctly understood that potatoes (as with all other goods we supply), after having been delivered to the carriers, are entirely at the risk of the purchaser.

Plant in January and February for Winter crops, and in August and September for Summer crops.

Customers are respectfully requested to send us their orders for Seed Potatoes as early in the season as possible.

EARLY ROSE. Pink kidney. Earliest.

BEAUTY OF HEBRON. Pink kidney. Early.

KING OF THE EARLIES. Round white. Early, but not so early as the Early Rose.

Mixed Ornamental Grasses	3d & 0 6

**Gynerium argenteum** (Pampas Grass).
per packet 3d. and 6d.

Flower Seeds.

NOTES ON SOWING AND CULTURE.

HARDY ANNUALS.

WHEN TO SOW.—The right season for sowing is much influenced by the character of the season. As a general rule, however, seeds of this class may be sown in the open ground during the months of January, February, and March.

SOIL.—Plants of this class will grow in ordinary garden soil, but where possible it is advisable to give them a better soil. Poor soil may be much improved by trenching and the addition of a moderate quantity of vegetable matter. If the seeds are to be sown in boxes, a compost of loam, sand, and leaf-mould would be well suited.

HOW TO SOW.—The surface-soil having been carefully prepared, the seed should be sown sparingly, and covered very lightly with fine, dry earth. After sowing, the soil should be well and carefully watered, and subsequently should never be allowed to become dry.

TRANSPLANTING.—When the seedlings are from one to two inches high, such as are growing too thickly should be carefully thinned out. The seedlings removed may, if desired, be planted again in another position. After transplanting, the seedlings should be watered and shaded from the sun for a few days. Transplanting should, if possible, be done in cloudy weather or else towards evening.

HALF-HARDY ANNUALS.

HALF-HARDY ANNUALS may, as a general rule, be sown in July, August, and September. The first sowings should be made in boxes or pans (well drained) placed in warm positions, from which the seedlings, when large enough, may be pricked out into pots or the open ground. The later sowings should be made in the open ground.

TENDER ANNUALS.

TENDER ANNUALS should be sown from September to December, either in boxes or pans or in the open ground. The treatment to be observed is, in general, the same as with the *Half-hardy* Annuals.

BIENNIALS AND PERENNIALS.

BIENNIALS and **PERENNIALS** may be sown at the same time and treated in a general way as though they were Annuals.

SMALLEST SEEDS.

THE SMALLEST SEEDS, such as *Calceolaria*, *Begonia*, *Gloxinia*, *Musk*, *Petunia*, *Portulaca*, &c., should be sown only in pans or pots, well-drained, and filled with a compost of rich loam, leaf-mould, and sand, the surface being particularly fine. The soil should be thoroughly saturated and the seeds sprinkled over the moistened surface and left uncovered with soil. A square of glass placed over the pan will keep in sufficient moisture until the seedlings have appeared. If it should be necessary to water before the seedlings have appeared, the pan should be placed for an hour in a vessel containing two or three inches depth of water; sufficient moisture will thus be absorbed without the necessity of watering the surface. When the seedlings have made their appearance the glass may be removed.

GENERAL REMARKS.

SEED-SOWING is a very simple matter, but it will often occur that in one garden all the seeds grow and in another precisely the same seeds will fail. It is impossible to explain all such cases, but as a rule it will be found to depend upon the care and love bestowed upon the pleasing pastime of raising plants from seeds.

The seeds must be carefully sown and carefully tended, and it is of importance that, from the time they are sown until the plants appear, they should never be allowed to become quite dry. Very many seeds perish because just as they begin to grow they become dried up, and the little plants wither away.

Moisture is required not only to soften the seeds' coat, but to enable the germ to grow; and too little or too much is equally fatal to success. If the soil is too dry, the seeds remain unchanged; if too much moisture is present, it excludes the necessary air and the seeds decay.

LAWN GRASS SEEDS.

Per lb. 2/-. (2 to 3 lbs. will sow a plot of ground 10 yards sq.)

CULTURE.—Sow in spring and autumn. Abundance of water is necessary to successful cultivation. The grass should be frequently mowed to induce compact growth.

Tree and Shrub Seeds.

SOME varieties of Tree and Shrub seeds germinate quickly and very freely, while others require careful treatment, and take a considerable time to come up. We would suggest that all Tree and Shrub seeds be sown in flat tins or boxes (well drained) in a soil composed of good loam, leaf mould, and sand. Sow the seeds thinly and evenly on a prepared surface and cover them with light sandy soil. Care must be taken that the seeds are not covered too heavily, or the vitality of the germ will become exhausted before it reaches the light and air necessary to its growth. Small seeds require very little covering—in fact, merely hiding them from view is sufficient. Seeds of a larger size need rather more soil over them. *It is better to cover seeds too little than too much.* Hard seeds, such as Acacia, should be soaked in water for 12 hours before sowing.

After sowing, the tin or box should be placed in a sheltered spot, and protected from the sun. *It is important that from the time of sowing until the seedlings appear, the seeds should never be allowed to become dry.* Very many seeds are allowed to perish through want of attention during the process of germination. When the seedlings are strong enough to be handled they should be planted out into beds or tins (a cloudy day is best for this work). It will be necessary to shade the plants for a week or ten days after they have been transplanted. Nurse the young plants safely through the first year or two, and little care will be necessary for the future.

The Spring and Autumn months are the best for sowing Tree and Shrub seeds. It is, however, advisable to sow as soon as possible after receiving them from the Seedsman, as many sorts do not retain their vitality for any length of time.

One Shilling,
POST F E.

Turner's Crimson Rambler.

ROSES.

*The season for planting
Roses begins about
March, and continues
until about September.*

PLANTS PACKED IN MOSS
ARE SAFELY FORWARDED, IN
THE SEASON, TO FAR-DISTANT
PLACES PER PARCELS POST.

SOIL.—A thorough preparation of the beds and borders in which roses are to be planted is of the greatest importance.

Roses do well in ordinary garden loam—to which a moderate amount of vegetable matter has been introduced. It is, however, often the case that the operator finds himself situated where the soil is not of such a character. A soil containing much sand or lime would be materially improved by the addition of loam (if obtainable). If the soil is heavy and retentive, sand should be added to render it porous and friable.

In all circumstances the top soil should be well dug to its full depth, and a moderate quantity of manure incorporated with it (well-rotted stable litter is excellent manure). The sub-soil should be loosened, but in no case should it be brought up. Where it is not possible to dig over the whole of the ground, holes may be dug two feet square—if depth of soil will allow without penetrating the sub soil—for planting, and filled in with good soil mixed with manure.

PLANTING.—A BUDDED OR GRAFTED ROSE should be planted to a depth that will cover the union of the stock and rose two or three inches. The rose will then send out roots just above the union; the plant will thus become doubly rooted, and consequently stronger. A ROSE ON ITS OWN ROOTS may be planted as before, the depth being indicated by the earth-mark.

The roots should be spread out fan-like, any bruised or broken fibres being pruned in, and the soil pressed down very firmly about them. In no case should the roots of a plant rest on a layer of fresh manure.

Immediately a rose has been planted it should be well watered—THE SOIL LITERALLY SOAKED—and afterwards, WHENEVER THE PLANT NEEDS WATER—it should be given to the same extent.

In general, an open aspect is best suited for Roses.

ROSES.—continued.

IN past years our Rose List has been divided into classes. This year we have arranged it in alphabetical order. The new plan will, we trust, facilitate the finding of any particular rose. The classes to which the roses belong are indicated by the letter or letters which directly follow each name.

T signifies Tea-scented; H P—Hybrid Perpetual; N—Noisette; B—Bourbon.

Sundry other varieties not in these classes will be found at the end of the list.

New varieties are printed in **BOLD TYPE**.

Varieties marked thus * are climbers.

Customers wishing to get a good selection of roses will please order as early as possible. When ordering a number of plants, a small supplementary list should be made, which list will only be used when the stock of any variety first selected is exhausted. Customers leaving the selection of kinds to ourselves may rely upon receiving an excellent assortment.

Prices quoted are for plants from the open ground, and not for plants in tins or pots.

A COLLECTION OF 12 VARIETIES OF ROSES, OUR SELECTION price 21/-

A COLLECTION OF 24 VARIETIES OF ROSES, OUR SELECTION price 40/-

SPECIAL QUOTATIONS FOR 100 PLANTS OR MORE,

SOME EXTRA STRONG WELL-GROWN PLANTS, OF GOOD SORTS each 3/- and 3/6

		Price each	s	d

Fruit Trees.

NEW VARIETIES ARE PRINTED IN **Bold Type.**

We would draw special attention to the fact that our Fruit Trees are grown and worked by us on the right stocks at our Nursery in Oatlands Park, and are undoubtedly better, and will give greater satisfaction, than imported trees.

W. & C. GOWIE.

The season for planting Fruit Trees commences in May and continues until September.

THE best soil for Fruit Trees in general is a good sound loam, and the **DEEPER THE BETTER.** In all circumstances, the top soil should be trenched to its full depth, and a moderate quantity of manure incorporated with it (well-rotted stable litter is excellent manure). The sub-soil should be loosened, but in no case should it be brought up. Where it is not possible to trench the whole of the ground, holes may be dug two feet square—if depth of soil will allow without penetrating the sub-soil—for planting, and filled in with good soil mixed with manure.

The ground should be prepared some time before the trees are planted. In planting it is important to observe—1st, that the roots are spread out; 2nd, that the tree stands perfectly upright; and 3rd, that it is planted to the same depth as it was in the nursery. After planting, the earth should be trodden down very firmly round the tree, forming a large basin by which to retain water. Strong stakes should be driven in, and the tree fastened to them until the roots get a good hold of the ground. Newly-planted trees should be watered once a fortnight in dry weather, and each time the supply of water given should be abundant.

Small trees packed in moss may be safely forwarded per Parcel Post, in the season, to any Post Office in South Africa.

We supply Orange, Naartje, Lemon, Guava and Loquat trees, in large tins, which may be forwarded by wagon or train and transplanted at any season of the year.

EXPLANATIONS.—The letter T signifies table fruit; K, fruit for culinary purposes. The months indicate the time when fruit ripens.

APPLES.

GRAFTED TREES. *Small (post) trees, 1/6 each; Larger trees, 2/- and 2/6 each. Extra large fruiting trees, 3/6 each.*

FOR 100 TREES OR MORE A CONSIDERABLE REDUCTION WILL BE MADE.

TREE TOMATO, each 1/6.

WALNUT, each 1/6, 2/-, 2/6 and 3/6.

Forest and Ornamental TREES AND SHRUBS.

PLANT IN AUTUMN AND IN
SPRING.

Araucaria excelsa.

Cedrus Deodara.

The cultural hints regarding Fruit-trees on page 47 will apply also, for the most part, to Forest and Ornamental-trees, the point of difference being in the matter of soil. The soil recommended for Fruit-trees will suit the larger number of trees in the present connection, but trees such as *Pinus pinea*, *Pinus pinaster* and *Casuarina*, thrive best and are in their element in stony and gravelly ground and on mountain tops and slopes.

Aberia Caffra	Kei Apple	per doz. 1/6; per 100 7/6 to 12/6
Acacia mollissima	Black Wattle	each 6d to 2/6
melanoxydon	Blackwood-tree	each 6d, 1/- & 2/6
sps.	Port Jackson Willow	per doz. 5/- & 7/6; each 6d & 9d
